

*Turn resistance into response,
response into result with.....*

Sulbamor 1 Gm

(Sulbactam + Cefoperazone inj.)

Helps restoring original broad anti-bacterial spectrum of cefoperazone

- Sulbactam irreversibly inhibits the hydrolytic activity of beta-lactamases

Also beneficial with inherent antibacterial effect of sulbactam

"One of the particular advantages of using sulbactam-containing combinations is that sulbactam itself has inherent activity against some *Acinetobacter baumannii*." [Akova M. Clin Microbiol Infect. 2008 Jan;14 Suppl 1:185-8.]

Indicated in :

- Intra-abdominal infections
- Respiratory tract infections
- Skin and soft tissue infections
 - Urinary tract infections
 - Nosocomial infections
 - Febrile neutropenia
- Post-operative prophylaxis
