

Inj. CEFVEL Vet

Cefoperazone Sodium 2gm + Sulbactam Sodium 1 gm

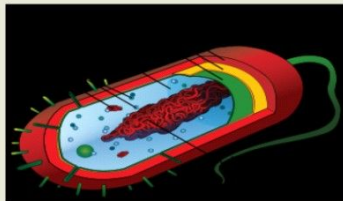

How Cefvel Vet Kills the Bacteria ?

The advantage of Sulbactam combination !!!

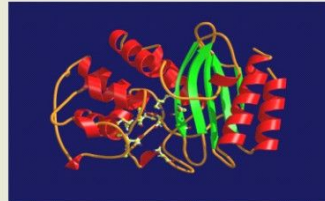

Mode of Action : Cefoperazone disturbs the cell wall production process. Cefvel inhibits (arrests) the final step of cell wall production - (transpeptidation step of cell wall peptidoglycans) , thus causing cell wall lysis. Sulbactam nullifies the action of any resistance by betalactamase - thus guarantees excellent performance

Cefoperazone

The Bacteria

Sulbactam

β -lactamase

➔ INDICATIONS

- Mastitis, Metritis, Cervicitis
- Broncho- pneumonia
- Abdominal Infections
- Mixed Bacterial infections
- Post operative treatment

➔ DOSAGE & ADMINISTRATION

By I/M and I/V route.

Large Animal : 5 – 10 mg/ Kg BW

Small Animal : 15 – 20 mg/Kg BW

Dissolve the content with sterile water provided

Wide - Anti bacterial Spectrum:

E.Coli, Pasteurella, Hemophilus , Pseudomonas Proteus , Klebsiella, Enterobactor, Staphylococcus Stretrococcus, Bacilus, Clostridium, Fusobacterium

AVAILABLE IN
3, 4.5 Gm Vials
